DAVANTIS Integration with Optimus Speakers ▬
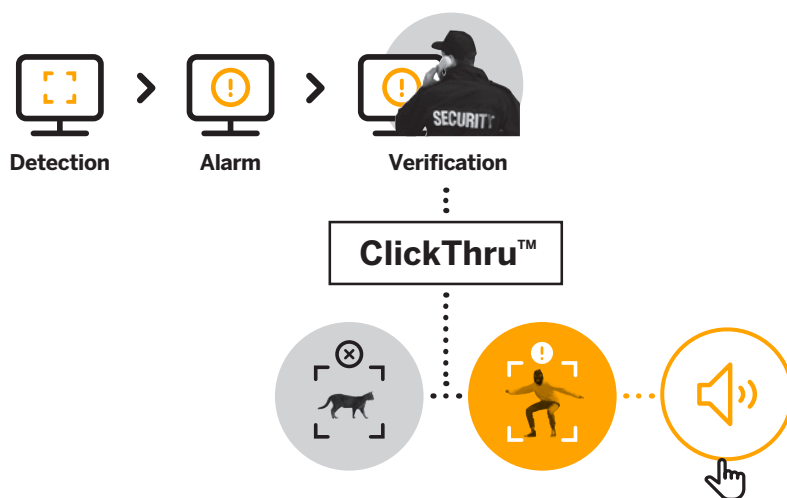

OPTIMUS
SOUND INNOVATION

DAVANTIS

The list of devices compatible with our DFUSION solutions continues to grow. Now, the **AE-15SIP exponential SIP speakers from Optimus** are integrated with our system, enhancing perimeter video surveillance with effective deterrent measures.

This integration strengthens our position as a video analytics solution compatible with a wide range of hardware devices, as well as with most CMS, VSM, and PSIM platforms.

Boost your perimeter security with DFUSION and Optimus SIP speakers.

Optimus SIP Exponential Speaker: A Deterrent Ally Against Intruders

The AE-15SIP model is a circular-mouth exponential speaker with an effective power output of 15 W. It features an RJ45 port and a 10/100 Base-TX network interface. Powered via PoE, it uses VoIP technology with the SIP protocol, enabling seamless integration into a data network and the broadcasting of messages from SIP phones or any other SIP-compatible network device.

Detection > **Alarm** > **Verification**

ClickThru™

The speaker's casing is made of waterproof ABS material with a high protection rating (IP67), making it suitable for installation in the harshest weather conditions. It is completely dustproof and can withstand full immersion in 1 meter of water for up to 30 minutes without any leakage.

When combined with DFUSION, this type of speaker enables **automated or supervised activation of alert messages and deterrent actions in response to specific intrusion events** detected by cameras.

DFUSION-Optimus Integration:
The Key to Maximum Security

Integrating elements like speakers, lights, or other deterrent devices is essential for enhancing perimeter security in any facility. These tools aim to create alerts that disorient and intimidate intruders, preventing unauthorized access attempts.

Security personnel can respond remotely, optimizing resources and minimizing the need for physical interventions or travel to the alert location.

"

Thanks to its compatibility with IP communication standards, installation is quick and easy. The result is a highly effective early warning system that enables DAVANTIS to significantly reduce incidents and improve the security of any facility

Antonio Ruíz
Optimus Sales Director

DFUSION makes it possible to activate these systems when suspicious movements or behavior are detected.
This provides a fast and effective response to intrusions.

DFUSION: innovation and advanced protection

With this integration, we reinforce our commitment to perimeter security. DFUSION not only increases the accuracy and efficiency of intrusion detection, but also adapts to the specific requirements of each installation. Its compatibility with a wide range of security devices and platforms makes it the ideal solution, taking your security to the next level with DFUSION!

BENEFITS

Installation without specific wiring. They use the IP network infrastructure (Ethernet or Wireless)

Easy, quick installation

Savings on installation costs

Simple to adapt to different environments and climates

Remote playback of audio messages

An effective burglar deterrent system
